

Proposed Bgauss Service Process Document

1. Executive Summary

- Bgauss Service Process
- Bgauss DMS
- Dealer Service Operations
- Document version/date

2. Scope

- Customer/Vehicle registration
- Job Card
- PDI
- Free Service
- First Free Inspection Report (FFIR)
- Paid Service
- Warranty
- Warranty Claim
- Parts
- Labour
- Service Invoice
- Vehicle Delivery
- Service Scheduler
- Service History
- Reports
- SMS/WhatsApp/OTP
- ERP/API integration

3. End-to-End Service Flow

Customer → Vehicle → Job Card → Inspection → Parts/Labour → Service → QC → Invoice → Delivery
→ Feedback → Service History

4. Module-wise Process

For every module, I'll document:

- User roles
- Preconditions
- Screen/field requirements
- Step-by-step process
- Business rules
- Validations
- Approval workflow
- API/ERP interaction
- Reports
- Error scenarios
- Audit trail

5. Warranty Process

Including your existing Bgauss rules such as:

- Warranty eligibility
- Job-card validation
- Part failure
- Warranty invoice
- Claim submission
- Claim approval/rejection
- 60-day claim control
- Chassis/service history validation

6. Service Scheduler

- Due-date calculation
- KM-based service
- Date-based service
- Reminder
- Job-card creation
- Exception handling

7. Parts Process

Parts Request → Availability → Issue → Consumption → Return → Warranty/Non-warranty classification

8. DMS ↔ ERP/API Architecture

- DMS
- RR-ERP
- Auto ERP
- API layer
- Dealer
- Service advisor
- Customer communication
- Integration failures/retry mechanism

9. Database Design

I can create complete SQL tables such as:

- Customers
- Vehicles
- Dealers
- Job Cards
- Service Schedules
- Service History
- Parts
- Part Issues
- Warranty Claims
- Warranty Claim Items
- Invoices
- Payments
- Technicians
- Inspection Reports
- FFIR
- PDI
- Service Appointments

- Notifications
- API Logs
- Audit Logs

10. Security & Controls

Using the *style/structure* of professional penetration-testing reports—not copying their proprietary content—including:

- Authentication
- Authorization
- Dealer data isolation
- API security
- OTP security
- Input validation
- SQL injection prevention
- File-upload security
- Sensitive-data protection
- Audit logging
- Session management
- Rate limiting
- Error handling

11. Source-Code Generation Package

I can also make it ready for AI/code generation:

- ASP.NET project structure
- Controllers
- Services
- Repositories
- SQL scripts
- Stored procedures
- API endpoints
- DTOs
- Authentication
- Frontend pages

- Validation
- Reports
- Unit-test prompts
- Deployment configuration
